# Aims of the National Curriculum

**Fluent recall of mental maths facts** e.g. times tables, number bonds. Etc.

To **reason** mathematically - children need to be able to **explain** the mathematical concepts with number sense; they must explain **how** they got the answer and **why** they are correct.

**Problem solving** - applying their skills to real-life contexts.

# FRACTIONS, DECIMALS AND PERCENTAGES

## National Curriculum Objectives:

Compare and order fractions whose denominators are all multiples of the same number

Identify, name and write equivalent fractions of a given fraction, represented visually, including tenths and hundredths

Recognise mixed numbers and improper fractions and convert from one form to the other and write mathematical statements  $> 1$  as a mixed number [for example,  $5 \frac{2}{4} + 5 \frac{4}{4} = 5 \frac{6}{4} = 1 \frac{5}{1}$  ]

Add and subtract fractions with the same denominator and denominators that are multiples of the same number

Multiply proper fractions and mixed numbers by whole numbers, supported by materials and diagrams

# Equivalent Fractions

Take a strip of paper. Fold it into half.

Take another strip of paper. Fold into quarters.

A stylized fraction  $\frac{1}{2}$ . The numerator '1' is blue, the denominator '2' is purple, and the horizontal bar is purple.

Another, fold into eighths.

A stylized fraction  $\frac{3}{4}$ . The numerator '3' is yellow, the denominator '4' is blue, and the horizontal bar is yellow.

Another sixteenths.

What equivalent fractions can you see? What patterns can you see?

# Equivalent Fractions

## Maths Hunt

Use the models to write equivalent fractions.

2

Emma uses the models and her multiplication and division skills to find equivalent fractions.

Use this method to find equivalent fractions to  $\frac{2}{4}$ ,  $\frac{3}{4}$  and  $\frac{4}{4}$  where the denominator is 16

3

Emma uses the same approach to find equivalent fractions for these fractions. How will her method change?

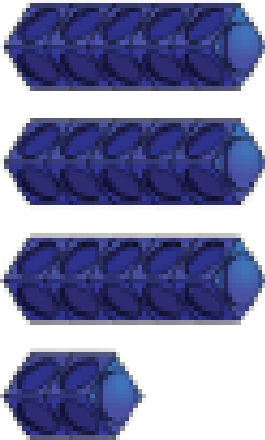

$$\frac{4}{12} = \frac{\square}{3}$$

$$\frac{6}{12} = \frac{\square}{4}$$

$$\frac{6}{12} = \frac{\square}{2}$$

# Mixed Numbers and Improper Fractions

Step 1: Start with mixed number	Step 2: Build the mixed number using cubes. Think carefully about how many parts make a whole.	Step 3: Count the number of cubes to find the numerator of the improper fraction
$3\frac{2}{5}$		$3\frac{2}{5} = \frac{17}{5}$

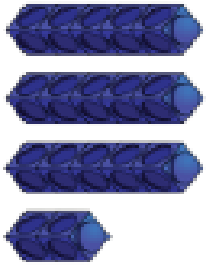

# Mixed Numbers and Improper Fractions

Use this method to convert  $2 \frac{2}{3}$

$$2 \frac{3}{5}$$

$$3 \frac{3}{4}$$

Step 1: Start with mixed number	Step 2: Build the mixed number using cubes. Think carefully about how many parts make a whole.	Step 3: Count the number of cubes to find the numerator of the improper fraction
$3 \frac{2}{5}$		$3 \frac{2}{5} = \frac{17}{5}$

## Mixed Numbers and Improper Fractions

To convert mixed numbers to improper fractions, multiply the whole number by the denominator and add the remaining numerator.

$$3 \frac{2}{5} = 3 \times 5 = 15 + 2 = 17/5$$

## Mixed Numbers and Improper Fractions

To convert an improper fraction to a mixed number, divide the numerator by the denominator. Write the remainder as a fraction.

Eg  $17/5 = 17$  divided by  $5 = 3$  remainder  $2 = 3 \frac{2}{5}$

QUIZ, QUIZ, TRADE

$$1 \frac{1}{2}$$

$$3 \frac{3}{4}$$

# Adding and Subtracting Fractions

2

Use the bar model to add the fractions. Record your answer as a mixed number.

$$\frac{3}{4} + \frac{3}{8} + \frac{1}{2} =$$

Draw your own models to solve:

$$\frac{5}{12} + \frac{1}{6} + \frac{1}{2}$$

$$\frac{11}{20} + \frac{3}{5} + \frac{1}{10}$$

$$\frac{3}{4} + \frac{5}{12} + \frac{1}{2}$$
